

Jio OnePass

A Unified, Tiered Loyalty Program — A Hypothetical Feature for Jio

Product Requirements Document (PRD)

Prepared by: Navdeep S Bist

June 2026

Disclaimer: This is an independent, hypothetical product case study exploring how Reliance Jio could unify loyalty across its consumer ecosystem (JioMart, AJIO, Reliance Digital, JioCinema/JioHotstar, MyJio, JioPay). It is a self-initiated PM practice exercise, not affiliated with, endorsed by, or based on internal information from Reliance Jio. All figures, pricing, and roadmaps are illustrative assumptions made for the purpose of this exercise.

1. Overview

Reliance has a strong presence across telecom, commerce, electronics, fashion, OTT, and payments — spanning JioMart, AJIO, Reliance Digital, JioCinema/JioHotstar, and MyJio & JioPay, all anchored by the Jio SIM. Each platform performs well independently at scale, but there is no unified value layer that drives cross-platform engagement and repeat behaviour.

As a result, Jio is not the default starting point for consumers when making everyday purchase decisions across grocery, fashion, electronics, or entertainment — despite owning the underlying assets that could make it so.

The proposed solution is Jio OnePass: a unified, tiered loyalty and membership program that sits across all Jio consumer platforms, introducing a single rewards currency, cross-platform earning and redemption, membership tiers, and telecom-linked benefit multipliers.

By leveraging Jio's telecom distribution advantage, offline retail footprint, and high-frequency digital touchpoints, the program aims to:

- Increase cross-category usage within the Jio ecosystem
- Improve retention and repeat purchase frequency
- Drive higher share of wallet across commerce and services
- Enhance overall customer lifetime value

2. Problem Statement

Despite wide asset ownership and a large active SIM user base, Jio does not enjoy strong top-of-mind recall when consumers initiate purchase decisions across grocery, fashion, electronics, or entertainment.

Jio's consumer platforms currently operate in silos:

- No unified rewards currency
- No cross-platform incentives
- Weak top-of-mind recall for commerce
- Limited incentives for ecosystem-wide engagement
- Lack of a daily engagement loop

Meanwhile, competitors have built exactly this kind of stickiness:

- Strong membership stickiness (e.g., Amazon Prime)
- Integrated rewards ecosystems (e.g., Tata NeuPass)

This siloed operation reduces cross-platform monetization and user lifetime value — Jio is leaving its biggest structural advantage (owning the full stack from telecom to commerce to content) unused as a loyalty lever.

3. Goals & Objectives

3.1 Strategic Goals

Increase Ecosystem Stickiness

Drive habitual, cross-platform engagement across JioMart, AJIO, Reliance Digital, JioHotstar, JioSaavn, JioCinema, and MyJio & Payments.

Target: $\geq 20\%$ increase in users transacting across 2+ Jio platforms within 12 months.

Improve Share of Wallet

Capture market share by integrating consumers into the Jio ecosystem through incentives and Jio currency, so users feel tangible, consistent value from staying within the network.

Target: Capture $\geq 15\%$ incremental annual spend per active loyalty user.

Increase ARPU (Average Revenue Per User)

Leverage India's largest digital ecosystem — spanning telecom, commerce, electronics retail, fashion, OTT, and payments — for cross-sell of commerce and content.

Target: $\geq 15\%$ uplift in ARPU for enrolled loyalty members vs. non-members.

Drive Membership Adoption

Convert the Jio SIM base into loyalty program members to grow the size of the ecosystem-connected user base.

Target: 40% of active Jio SIM base enrolled in the Lite tier; 15–20% of enrolled users upgraded to paid tiers within 12 months.

3.2 Business Objectives

Increase Repeat Purchase Frequency

Encourage higher transaction frequency through offers, rewards, and multipliers — improving share of wallet in grocery & electronics and increasing OTT premium conversions.

Target: $\geq 30\%$ increase in repeat purchase rate across commerce platforms.

Improve Retention

Reduce churn by embedding offers, incentives, and Jio Points into daily digital habits, so members experience tangible, consistent savings.

Target: $\geq 10\%$ reduction in churn among loyalty members; $\geq 70\%$ renewal rate for paid tiers.

Increase Cross-Sell Conversion

Move users from a telecom-only relationship with Jio to active usage of commerce, electronics, fashion, OTT, and payments.

Target: $\geq 20\%$ of telecom-only users transact on at least one commerce platform.

3.3 Product Objectives

Unified Rewards System

Launch a single cross-platform points currency and wallet with real-time accrual (<30 seconds latency), cross-app redemption, and tier-based earning multipliers.

Tiered Membership Model

The tiered membership model is designed to balance mass adoption, monetization, and ecosystem stickiness, following a funnel: Lite (Acquire — free) → Plus (Monetize) → Max (Maximize LTV).

Naming note: this PRD standardizes on “Max” for the top tier throughout (the original draft used “Pro” and “Max” inconsistently in different sections).

Telecom-Driven Growth Engine

Integrate loyalty enrollment and reward nudges into recharge journeys, the MyJio dashboard, SMS/notification touchpoints, and the Jio OnePass wallet.

3.4 Customer Experience Objectives

- Clear, transparent rewards ledger
- Simple earning and redemption rules
- Seamless SSO (Single Sign-On) across apps
- Instant gratification (cashback visibility at checkout)

4. Membership Tier Structure

Tier	Pricing	Key Benefits
Lite	Free	Base 2–3% reward earnings, telecom multiplier events, welcome bonus, limited-time campaign access, basic OTT (ad-supported)
Plus	₹499–₹699/year	Free delivery above threshold, 5% assured cashback (capped), early sale access, partial OTT bundles, double recharge multiplier, priority support
Max	₹1499–₹1999/year	Family pooling (up to 5 members), 8–10% cashback, full OTT bundles, device upgrade bonus, EMI processing fee waiver, event pre-booking access

Tier 1 — Jio OnePass Lite (Free)

Objective: Mass adoption + ecosystem discovery

Target Segment:

- Prepaid users
- Tier 2/3 cities
- Price-sensitive customers
- Telecom-only users

Eligibility: Auto-enrolled for all active Jio SIM users

Core Benefits:

- Base reward earnings — 2–3% back as Jio Points on JioMart, AJIO, Reliance Digital, and Recharge
- Telecom multiplier events — recharge-based reward boosts, data-usage milestone rewards
- Welcome bonus — one-time joining reward (illustrative cap, to be finalized)

- Limited-time campaign access — festive bonus multipliers, flash sale early access
- Basic OTT benefit — select content and live shows, ad-supported access

Purpose: Create the first habit loop and a path to monetized tiers; introduce cross-platform awareness; build rewards-wallet familiarity.

Tier 2 — Jio OnePass Plus (₹499–₹699/year)

Objective: Drive monetization (ROI) + repeat usage

Target Segment:

- Urban shoppers
- Frequent grocery buyers
- OTT viewers
- Mid-ARPU telecom users

Core Benefits:

A. Commerce

- Free delivery on JioMart above threshold
- 5% assured cashback (capped monthly)
- Early access to major sales
- Bonus points during campaign periods

B. Content

- JioCinema Premium (partial bundle)
- JioHotstar Super (partial bundle)
- Exclusive sports access windows
- Ad-free upgrade options (discounted)

C. Telecom

- Double reward multiplier on recharge
- Special recharge packs with bonus data
- Priority customer support

D. Payments

- Cashback on bill payments (capped)
- UPI milestone rewards

Tier 3 — Jio OnePass Max (₹1499–₹1999/year)

Objective: Maximize lifetime value per household

Target Segment:

- Family households
- High spenders
- Device buyers
- Multi-OTT consumers

Core Benefits:

A. Family Pooling

- Add up to 5 family members

- Shared reward wallet
- Pooled tier progress

B. Higher Cashback

- 8–10% cashback (category-specific caps)
- Electronics bonus rewards
- Annual bonus points milestone

C. OTT & Telecom

- Full JioCinema Premium and JioHotstar Premium
- Select partner OTT inclusion
- Early sports ticket booking
- Bonus offers and rewards on recharge

D. Electronics & Devices

- Annual device upgrade bonus
- No-cost EMI processing fee waiver
- Extended warranty discount at Reliance Digital
- Offers and rewards at offline stores

E. Experience Layer

- Event pre-booking access
- Concert/sports early access
- Early access to sales and special offers
- Exclusive drops on AJIO

5. Assumptions

- Brands and verticals within the Reliance ecosystem (JioMart, AJIO, Reliance Digital, JioCinema/JioHotstar) are willing to absorb or co-fund cashback liability for a shared loyalty program, rather than treating it purely as a cost
- A single customer identity can be reliably resolved across telecom (SIM-based) and commerce (account-based) systems without major data-quality issues
- Consumers in Tier 2/3 cities are price-sensitive enough that a free, auto-enrolled Lite tier will see meaningful activation rather than being ignored
- Offline retail partners (Reliance Digital stores, etc.) can adopt POS-level loyalty identification (mobile number/QR) without significant operational disruption
- Vendor and brand partners on JioMart/AJIO are willing to participate in a margin-sharing or vendor-funded cashback model rather than Jio bearing the full liability alone

6. Out of Scope (V1 / Pilot)

- Max tier (family pooling) at pilot launch — pilot is scoped to Lite + Plus tiers only (per Section 14, Phase 3)
- Full marketplace-wide dynamic personalization of offers (e.g. AI-recommended individualized cashback rates) — V1 uses fixed, tier-based rates
- Partner OTT platforms outside the JioCinema/JioHotstar/JioSaavn ecosystem

- International roaming or non-India market rollout
- Secondary/resale market for Jio Points (points are non-transferable outside the family pooling structure in Max)
- Full POS system replacement for offline retail partners — only loyalty identification and point accrual/redemption are integrated, not a complete retail management overhaul

7. Target Personas & Happy Path

Persona 1: Bharat Value Seeker

A prepaid Jio SIM user who wants to earn rewards on recharge so they feel they are saving money across their everyday expenses.

Happy Path

1. User opens the MyJio app and sees multiple options
2. A Jio OnePass enrollment prompt appears, inviting the user to join
3. User taps the prompt and views the Lite, Plus, and Max plans with their features and benefits
4. User selects “Mobile Recharge”
5. User searches for a recharge pack and sees new offers/discounts tied to Jio OnePass
6. User selects a plan and completes payment
7. Jio Coins appear in the user’s Jio Wallet immediately after recharge confirmation

Use Case: Recharge ₹xxx → receive 2x reward multiplier and offers across all Jio platforms → redeem points on next purchase.

Persona 2: Urban Convenience Shopper

A frequent online shopper who wants a single membership providing fast delivery, assured cashback, exclusive deals, and entertainment benefits across JioMart, AJIO, Reliance Digital, JioHotstar, JioCinema, and JioSaavn — without juggling multiple apps or subscriptions.

Key Expectations

- Free or priority delivery for groceries, fashion, and electronics
- Early access to major sales and consistent cashback on purchases
- Rewards accumulate in one unified wallet, redeemable across categories without complex rules
- Clear visibility of savings as a member during checkout

Use Case: Subscribes to OnePass Plus → gets free delivery + cashback % → uses points across AJIO, electronics, and other platforms.

Persona 3: Family Digital Household

A household decision-maker managing multiple family members across smartphones, OTT platforms, online shopping, and shared data plans, who wants telecom, shopping, electronics, and entertainment benefits unified under one plan.

Key Expectations

- Bundled OTT, telecom, groceries, fashion, and electronics benefits with shared rewards

- Ability to add family members and pool reward points across recharges, bill payments, groceries, and electronics purchases
- Bundled OTT access, priority telecom support, and special device upgrade benefits

Use Case: Buys OnePass Max → adds 5 family members → redeems OTT & device upgrade benefits → saves money across household spending.

8. User Stories & Acceptance Criteria

8.1 Auto-Enrollment into Lite Tier

As a Jio SIM user, I want to be automatically enrolled in OnePass Lite so that I start earning rewards without any extra signup effort.

Acceptance Criteria

- Given a SIM is active and verified, the user is auto-enrolled into Lite within 24 hours of activation, with no manual action required.
- Given a user is auto-enrolled, they receive a one-time welcome notification explaining the Lite benefits and how to view their wallet.
- Given a user opts out of loyalty communications, they remain enrolled (for earning purposes) but stop receiving promotional nudges.

8.2 Earn Points on Recharge

As a prepaid user, I want to earn Jio Points when I recharge so that I feel rewarded for routine telecom spend.

Acceptance Criteria

- Given a successful recharge payment, Jio Points are credited to the wallet within 30 seconds.
- Given a recharge falls within an active multiplier campaign, the multiplier is applied automatically and shown in the transaction confirmation.
- Given a recharge payment fails or is refunded, no points are credited, and any provisionally-shown points are reversed.

8.3 Redeem Points at Checkout (Cross-Platform)

As a OnePass member, I want to redeem my points during checkout on any integrated platform so that my rewards feel usable, not locked to one app.

Acceptance Criteria

- Given a user has redeemable points and an eligible cart, available points and their cash-equivalent value are shown before final checkout confirmation.
- Given a redemption cap applies to the category or tier, the system clearly displays the maximum redeemable amount before the user confirms.
- Given a redemption is applied, the final payable amount updates in real time and is reflected in the order confirmation and wallet ledger.

8.4 Upgrade from Lite to Plus/Max

As a Lite member, I want to upgrade to a paid tier within MyJio so that I can access higher cashback and bundled benefits.

Acceptance Criteria

- Given a user selects “Upgrade,” they see a side-by-side comparison of their current tier vs. the target tier before confirming payment.
- Given payment for the upgrade succeeds, the new tier’s benefits are active within 5 minutes.
- Given payment fails, the user remains on their current tier with no partial/inconsistent benefit state.

8.5 Family Pooling (Max Tier)

As a Max tier subscriber, I want to add family members to a shared wallet so that my household’s spending and rewards are pooled together.

Acceptance Criteria

- Given a primary Max subscriber adds a family member by mobile number, the invitee must confirm via OTP before being added — numbers cannot be added without consent.
- Given up to 5 members are added, a 6th invite attempt is blocked with a clear “family limit reached” message.
- Given a family member is removed, their individual earning history remains intact, but they stop contributing to/drawing from the shared wallet from that point forward.

8.6 View Unified Wallet Ledger

As a OnePass member, I want a transparent ledger of points earned, redeemed, and expiring so that I trust the program and don’t feel cheated.

Acceptance Criteria

- Given a user opens the wallet, points earned, points redeemed, and upcoming expiry dates are all visible on a single screen.
- Given points are within 30 days of expiry, the user receives a proactive notification with the exact amount expiring and the expiry date.

8.7 Tier Status Progress (Silver/Gold/Platinum)

As a paid-tier member, I want to see my progress toward the next status level so that I’m motivated to keep engaging with the ecosystem.

Acceptance Criteria

- Given a user is enrolled in a paid tier, a progress bar shows current annual spend/recharge value against the next status threshold, updated at least daily.
- Given a user crosses a status threshold, they are notified within 24 hours and the new benefits are active immediately.

8.8 Offline (POS) Earning and Redemption

As a Reliance Digital in-store customer, I want my OnePass membership recognized at checkout so that I earn and redeem points even when shopping offline.

Acceptance Criteria

- Given a customer provides their mobile number or QR code at POS, the system identifies their OnePass account within 5 seconds.
- Given an offline purchase is completed, points are credited and visible in the app wallet within 5 minutes (allowing for offline-to-online sync delay).
- Given the POS system has no connectivity at the moment of purchase, the transaction is queued and synced once connectivity is restored, without blocking the in-store checkout.

9. Edge Cases

Deviations from the happy paths in Section 7 that engineering, fraud, and CX teams must explicitly design and test for.

#	Edge Case	Impact	Proposed Solution
1	User churns SIM but has unredeemed points / active paid tier	Unclear liability, customer complaints	Define a grace period (e.g. 90 days) post SIM deactivation during which points remain redeemable via the app; auto-notify user before forfeiture
2	Family member tries to join two different Max households simultaneously	Pooling logic conflict, double-counted rewards	Mobile number can only be an active family-pool member of one household at a time; joining a new pool requires leaving the previous one
3	Abnormal/bot-like reward accumulation pattern detected (cashback abuse)	Fraud, margin erosion (flagged as a top risk in Section 12)	Fraud detection engine flags and freezes suspicious wallets pending review; legitimate users can appeal via support
4	Points awarded but the underlying transaction is later refunded/cancelled	Inflated point balance, potential redemption of “phantom” rewards	Points are provisional for 48 hours on commerce transactions; refunded transactions trigger automatic point reversal
5	User redeems points, then the redeemed order is cancelled/returned	Customer loses points value but also gets a refund — double benefit risk	On a verified return, redeemed points are restored to the wallet and any cash refund is adjusted to exclude the redeemed-points portion
6	Tier auto-downgrade occurs mid-renewal cycle due to a missed payment	Customer confusion, sudden loss of benefits mid-cycle	Grace period (e.g. 7 days) with a retry-payment prompt before downgrade; clear in-app and SMS notice before any benefit is removed

#	Edge Case	Impact	Proposed Solution
7	Two vertical teams (e.g. JioMart and Reliance Digital) run conflicting reward campaigns on the same SKU/category	Inconsistent or doubled rewards, margin risk	Centralized campaign rule engine validates for overlapping multipliers before campaign go-live; conflicts auto-flagged to both teams
8	Offline POS loyalty lookup fails (e.g. customer's number not recognized)	Lost earning opportunity, in-store friction, queue delays	Manual fallback: store staff can issue a reference code at checkout; customer claims points later in-app via that code
9	Points expiry occurs while a redemption is mid-transaction	Customer is denied a redemption they believed was valid	Points are locked (not expired) the moment a redemption flow begins, until that transaction completes or times out
10	Family pool primary subscriber's membership lapses (non-renewal)	All 5 family members lose benefits simultaneously without warning	Pre-expiry reminders sent to the primary AND all pooled members; a defined grace period before pooled benefits are revoked

10. Requirements

10.1 Functional Requirements

A. Membership & Enrollment

- System shall support three tiers: Lite (Free), Plus (Paid), and Max (Family)
- Users shall be auto-enrolled into Lite upon active Jio SIM verification
- Users shall be able to upgrade/downgrade membership within MyJio
- System shall support annual subscription purchase and renewal (manual + auto-renew)
- Max tier shall allow adding/removing up to 5 members via mobile number verification (with OTP consent, per Story 8.5)

B. Unified Rewards Engine

- System shall issue a single loyalty currency (Jio Points); 1 Rupee spend = 1 Jio Point (illustrative ratio)
- Points shall be earned across recharge (prepaid/postpaid), commerce (JioMart, AJIO, Reliance Digital), OTT subscriptions, and bill payments/UPI
- Points shall be credited in near real-time (≤ 30 seconds)
- Points shall have configurable expiry rules (default 6 months)
- System shall support reward multipliers based on tier and campaigns
- Points shall be redeemable across all integrated platforms

C. Tier-Based Benefits

- System shall support status levels (Silver/Gold/Platinum) within paid tiers, based on annual spend + recharge value
- System shall calculate tier eligibility based on annual spend and recharge value
- Users shall view a tier progress bar and next-tier benefits
- System shall auto-upgrade/downgrade status tier based on defined criteria
- Higher status unlocks higher cashback %, early sale access, premium support, and exclusive offers

D. Integration Requirements

- MyJio dashboard integration
- Wallet ledger visibility
- Cross-app SSO login

D1. Checkout & Redemption

- Users shall see earned points before checkout confirmation
- Users shall be able to apply points during checkout
- System shall display final payable amount after redemption
- Redemption caps shall be configurable by category and tier

D2. Dashboard & Transparency

- Unified wallet ledger shall display points earned, points redeemed, expiry timeline, and a savings summary
- System shall provide an annual savings summary for renewal nudges

D3. Notifications & Nudges

- System shall trigger reward notifications post-transaction
- System shall show upgrade nudges during recharge and checkout
- Campaign-based bonus notifications shall be configurable

D4. Offline Integration

- POS systems shall support loyalty identification via mobile number/QR
- Points shall be earned and redeemed in physical stores
- Real-time sync between offline and online systems (with offline fallback per Edge Case 8)

E. Gamification Layer

- Daily streak rewards
- Limited-time multipliers
- Flash sale early access
- Sports-event-linked bonuses

10.2 Non-Functional Requirements

Category	Requirement
Performance	Reward crediting latency < 30 seconds
Reliability	99.5% uptime

Category	Requirement
Fraud Prevention	Dedicated fraud detection engine; system shall detect abnormal reward accumulation patterns; configurable rule sets
Scalability	Scalable to 150M users
Analytics	Real-time analytics dashboard for campaign and tier performance

11. Dependencies

11.A Technical Dependencies

A.1 Unified Customer Identity

- Single sign-on (SSO) across MyJio, JioMart, AJIO, Reliance Digital, and JioCinema
- Centralized customer ID mapping across telecom and commerce platforms
- Identity resolution for family plan pooling

A.2 Loyalty Engine Infrastructure

- Centralized reward calculation engine
- Real-time transaction APIs
- Wallet ledger microservice
- Configurable rule engine for tier, multipliers, and expiry
- Scalable infrastructure to support 100M+ users

A.3 Cross-App API Integration

- Recharge transaction APIs
- Commerce checkout integration
- OTT subscription validation
- POS integration for offline stores
- Payment gateway integration (UPI, cards, BBPS)

A.4 Data & Analytics

- Unified data warehouse
- Cross-platform behavior tracking
- Tier qualification logic engine
- Campaign performance dashboard
- Fraud detection & anomaly detection models

11.B Business Dependencies

B.1 Vertical Alignment

- Alignment across telecom, retail, fashion, electronics, OTT
- Agreement on reward funding model
- Margin-sharing model between verticals

B.2 Vendor & Brand Partnerships

- Vendor-funded cashback agreements
- Co-branded promotions

- Device financing partners (for EMI benefits)

B.3 OTT Content Agreements

- Premium bundling rights
- Licensing constraints
- Content tier eligibility

11.C Financial Dependencies

- Budget allocation for cashback liability
- Reward liability accounting treatment
- Breakage (unused points) forecasting
- Tier pricing approval
- ROI model validation

11.D Operational Dependencies

D.1 Offline Store Enablement

- POS software upgrade
- Staff training
- QR / mobile number loyalty linking

D.2 Customer Support

- Tier-based support routing
- SLA definition for premium users
- Escalation matrix design

12. Risks & Mitigation

Risk	Impact	Mitigation
Over-discounting	Margin erosion	Cap cashback %, vendor-funded model
Low adoption	Poor ROI	Telecom-driven onboarding via recharge/MyJio nudges
Tech fragmentation	Poor UX	Unified loyalty microservice across all platforms
Cashback abuse	Fraud	AI fraud monitoring (Edge Case 3)
Cannibalization	Reduced profitability	Tier-based reward caps
Cross-vertical campaign conflicts	Inconsistent/doubled rewards	Centralized campaign rule engine (Edge Case 7)
Family-pool churn cascades	Sudden multi-user benefit loss, support spikes	Pre-expiry reminders to all pooled members + grace period (Edge Case 10)

13. Success Metrics

North Star Metric

Active Users Transacting Across 2+ Jio Platforms per Month

Defined as the count of OnePass members who complete at least one paid transaction (recharge, commerce, OTT, or bill payment) on 2 or more distinct Jio platforms within a calendar month. This directly reflects the core problem statement — ecosystem silos and weak cross-platform recall — rather than simply tracking enrollment or single-platform spend, both of which could grow without actually solving Jio's stickiness problem.

Guardrail Metrics

Metrics that must not degrade while the North Star Metric grows:

Guardrail	Why It's a Guardrail
Cashback liability as % of platform revenue	Cross-platform growth should not come at the cost of unsustainable margin erosion (Section 12's top risk)
Fraud/abuse rate on reward accumulation	Growth in points issuance should not be driven by gaming the system rather than genuine engagement
Customer support escalation rate (tier/redemption disputes)	Scaling membership should not overwhelm support with billing, expiry, or pooling disputes
Single-platform (non-loyalty) conversion rate	The program should not cannibalize existing non-member purchase behavior on any individual platform

Supporting Success Metrics

- % of Jio SIM base enrolled
- Cross-platform purchase rate
- Average annual spend/user
- Membership renewal rate
- Cost per acquired loyal user
- NPS improvement

14. Timeline / Milestones

Phase	Timeline	Summary
Phase 0: Strategy & Alignment	Month 0–1	Executive approval, budget allocation, KPI definition
Phase 1: Architecture & Design	Month 2–3	Loyalty engine design, tier structure finalization, API framework definition, UX wireframes

Phase	Timeline	Summary
Phase 2: Build & Integration	Month 4–7	Backend reward engine, app integrations (MyJio, JioMart, AJIO, etc.), POS integration pilot, fraud systems
Phase 3: Pilot Launch	Month 8	2 cities; Lite + Plus tier only (Max tier explicitly out of scope for pilot — see Section 6); controlled rollout
Phase 4: National Launch	Month 9–10	Full marketing rollout, offline store onboarding, Max tier introduction
Phase 5: Optimization	Month 11–12	Data-led reward tuning, tier migration nudges, behavioral experimentation

15. Open Questions

- What is the exact margin-sharing formula between verticals (JioMart, AJIO, Reliance Digital, JioCinema) for funding cashback liability?
- Should points earned via telecom recharge have different expiry rules than points earned via commerce, given different repurchase cycles?
- How will Jio Points breakage (unused/expired points) be accounted for financially, and does this materially affect the ROI model?
- What happens to a Max-tier family pool if the primary subscriber wants to transfer primary status to another family member?
- Should the pilot cities be chosen based on existing Reliance Digital offline density, JioMart penetration, or SIM concentration — and what's the tradeoff?
