Launch Strategy Document

Monetization, Creator/Brand Growth Plan & 8-Month Launch Strategy

Prepared by: Navdeep S Bist — Product Manager (Practice Case Study)

June 2026

Disclaimer: This is an independent, hypothetical product case study exploring how Myntra could deepen creator-led live commerce on its platform. It is a self-initiated PM practice exercise, not affiliated with, endorsed by, or based on internal information from Myntra. All figures, pricing, and roadmaps are illustrative assumptions made for the purpose of this exercise.

1. Executive Summary

M-Live is a hypothetical Myntra feature that turns live, creator-hosted fashion streams into a direct shopping channel — letting viewers watch styling demos, ask real-time fit/fabric questions, and buy without leaving the video player.

The target launch users are two-sided: fashion creators/influencers and brands looking for a new sales and storytelling channel, and Myntra shoppers (especially Gen Z and Tier-2 audiences) who already discover trends on social media but currently purchase elsewhere.

The launch vision for the first 8 months is to prove the core loop — watch → ask → trust → buy without leaving the stream — with a tightly curated closed beta of 50 influencers and 10 brands, then expand to public launch with festival-tied flagship events, without letting return rates or fake engagement undermine the program's economics.

2. Monetization Strategy

M-Live's monetization model is already defined in the PRD (Section 8.3) as a three-part structure rather than something this document needs to design from scratch. This section focuses on sequencing and positioning at launch.

2.1 Revenue Streams & Launch Sequencing

Stream	Who Pays	When It Activates
Commission-based revenue share	Creator (% of GMV from their tagged sales)	From MVP/closed beta (Phase 2) — the core mechanic that must be proven first
Sponsored live placements	Brands (pay for featured visibility in a stream)	From Beta Optimization (Phase 3), once organic streams show reliable viewership data to sell against
Brand-led premium live events	Brands (fund and co-produce flagship sessions)	From Public Launch (Phase 4) — requires proven production quality and audience scale
Exclusive paid-access fashion previews	Users (pay for early/exclusive access)	Future phase — explicitly out of scope for V1 (PRD Section 5)

2.2 Who Pays, and Why

Segment	Value Driver	Pricing Approach
Creator	Access to Myntra's existing customer base + a new monetizable content format beyond standard influencer marketing	Commission-only (no upfront fee to creators) — removes adoption friction; creators only earn when they sell
Brand/Seller	A storytelling channel that addresses the PRD's stated	Pay only for incremental visibility (sponsored placement) or co-

Segment	Value Driver	Pricing Approach
	problem — trend discovery happening on social media but purchase happening elsewhere — brought directly onto Myntra	funded flagship events, not a mandatory fee to participate at all
User	Styling confidence and instant Q&A that reduces the PRD's stated high-return-rate problem	No direct cost to the user beyond the product price; live-only discounts are a retention lever, not a revenue stream

2.3 Benchmarking

Reference	Model	Relevance
Instagram/TikTok Shop	Creator commission + brand-funded promotion	Validates that commission-led creator monetization works at scale, but lacks Myntra's existing catalogue/fulfilment integration
Flipkart Live	Commission-based live shopping emerging in Indian e-commerce	Closest direct competitor — sets the bar for what “good” live commerce looks like to Indian shoppers
Amazon Live	Creator-led product showcases with influencer storefronts	Demonstrates the value of pairing live content with a trusted, high-fulfilment-reliability platform — Myntra's M-Express integration plays the same role

2.4 Justification

Commission-only pricing for creators (no upfront cost) mirrors the PRD's own Risk table, which flags “Low creator adoption” as a Medium-High risk mitigated by “Higher initial commission + brand collaborations” — meaning the launch strategy should lead with creator economics, not platform fees. Sponsored placements and premium events are deliberately sequenced after the commission model is proven (Phase 3–4), because brands will only pay for visibility once there is real viewership and conversion data to point to — selling sponsorship on an unproven format would undermine early brand trust rather than build it.

3. Growth Strategy (Research → MVP → Beta → Public Launch)

This section reuses the PRD's 8-month, 4-phase rollout (Section 14) and reframes each phase around growth levers, channels, and metrics for both sides of the marketplace (creators/brands and viewers).

Phase 1: Research & Planning (Month 1–2)

Focus: Validate the commission framework and technical feasibility before building anything customer-facing.

- Conduct structured creator interviews (per the PRD's own Phase 1 plan) to pressure-test willingness to commit to a regular streaming schedule under a commission-only model
- Define the commission framework with input from 3–5 prospective brand partners, not in isolation — brand buy-in on commission economics is a named Business Dependency (PRD Section 10.B)
- Run a technical feasibility assessment specifically on CDN cost-at-scale, since 500K+ concurrent viewer support (PRD Section 8.1) is the most expensive infrastructure commitment in this PRD

Phase 2: MVP Development & Closed Beta (Month 3–5)

Focus: Prove the core loop with a small, hand-picked creator and brand cohort — not a public launch.

Channels & Growth Levers

- Direct, invitation-only recruitment of 50 fashion influencers and 10 brands (per PRD Phase 2) — curated for production quality and existing audience trust, not open self-serve signup
- Internal Myntra promotion only (Live homepage section, push to existing followers of invited creators) — no external marketing spend yet
- Pair each invited creator with a dedicated onboarding contact to ensure KYC, product tagging, and dashboard usage are smooth (reducing early-churn risk among the most important first cohort)

Target Metrics

- Closed beta participation: 50/50 invited creators actively streaming at least once within the beta window
- View-to-cart rate and view-to-purchase conversion tracked as baseline (PRD Section 3.2 KPIs), not yet measured against the 20% target
- Guardrail check: live-commerce return rate tracked from day one, even at small volume, to catch size/fit issues early

Phase 3: Beta Optimization (Month 6)

Focus: Layer in engagement and AI features that the closed beta data shows are actually needed — not features for their own sake.

Channels & Growth Levers

- Add chat & polls and push notification reminders only after closed-beta data confirms viewers want deeper interaction (avoids building unused features)
- Begin selling sponsored placements to brands that participated in the closed beta and already have GMV data to evaluate ROI against

- A/B test live pricing & placement using the now-larger beta dataset to inform Public Launch defaults

Target Metrics

- Average watch time trending toward the 25% uplift target (PRD Section 3.1)
- AI size-recommendation adoption rate among streams that use it, as an early read on the return-rate-reduction goal
- First sponsored placements sold, validating the Phase 3 monetization sequencing decision (Section 2.1)

Phase 4: Public Launch (Month 7–8)

Focus: Scale to the full creator/brand base with flagship moments, now that the core loop and monetization are proven.

Channels & Growth Levers

- Major marketing campaign timed to festival fashion live events (per PRD Phase 4), giving the launch a natural cultural moment rather than a generic feature announcement
- Celebrity stylist collaborations and sponsored brand showcases, now sellable with real beta performance data as proof
- Open creator program to a wider self-serve cohort beyond the original 50, using the Phase 2–3 onboarding playbook rather than improvising at scale

Target Metrics

- View-to-purchase conversion: $\geq 20\%$ increase for live-featured SKUs (PRD Section 3.1 target)
- Return rate: $\geq 10\%$ reduction for live-purchased apparel (PRD Section 3.1 target)
- Creator-led GMV contribution % trending up month-over-month without guardrail degradation (Section 5)

Cross-phase principle: return rate and fraud are the binding constraints on how fast this scales, not viewer demand. Myntra already has brand recall and a content-hungry Gen Z/Tier-2 audience; every phase above is sequenced to prove styling confidence translates into kept (not returned) purchases before exposing the format to celebrity-scale, festival-tied marketing spend.

4. MVP Strategy

4.1 Problem Validation

The PRD's problem framing (inspiration-driven discovery happening off-platform, price-driven conversion) is well-supported by the broader content-commerce trend (Instagram, Flipkart Live) but currently lacks direct evidence that Myntra's specific creator base and audience will replicate that behaviour. Before committing to the Phase 2 build, the following lightweight validation is recommended:

- Structured interviews with 8–10 fashion creators/influencers (beyond the eventual closed-beta cohort) on actual willingness to commit to a regular streaming schedule under commission-only pay, and their biggest stated concerns
- A short survey or informal poll to existing Myntra shoppers on whether they currently follow fashion creators on Instagram/YouTube and have purchased a creator-

recommended item elsewhere — directly testing the PRD's stated “discover on social, buy elsewhere” problem

- Desk research into Flipkart Live's public reception and any available performance benchmarks, as the closest direct competitor analogue in the Indian market
- A simple model estimating CDN and infrastructure cost at the closed-beta scale (50 creators) vs. the full 500K+ concurrent viewer target, to sanity-check that Phase 4 scale is financially justified by the GMV impact projected in PRD Section 14

4.2 MVP Features & Justification

Feature	Justification
Basic live streaming (portrait, adaptive video)	The minimum viable format to test whether users will watch and engage at all — nothing else matters if this doesn't hold attention
Product tagging + floating product rail	Directly addresses the PRD's core problem: the gap between seeing a product live and being able to purchase it
In-stream cart addition & One-Click Buy	Removes the navigation friction that the PRD identifies as the central conversion barrier
Creator analytics dashboard	Required to prove commission economics to creators and justify continued participation beyond the closed beta
Real-time inventory sync	Prevents the highest-impact edge case (overselling tagged products), which would destroy creator and brand trust immediately

Features deliberately excluded from MVP — chat/polls, AI styling recommendations, sponsored placements, celebrity collaborations — are valuable but not required to validate the core watch-to-buy loop, and are correctly sequenced into Phase 3–4 per the PRD's own rollout plan.

5. Success Metrics

Metrics are organized in three tiers, consistent with the PRD's North Star and Guardrail framework (Section 12).

L0 — Business-Critical

Metric	Definition	Why It Matters
Weekly GMV from Completed, Non-Returned Live Purchases	North Star Metric — live-stream GMV that survives the standard return window	Forces optimization for genuine styling confidence, not just impulsive conversion
Live-commerce return rate (guardrail-turned-L0)	% of live-purchased items returned	The program is not viable if it merely shifts returns from search-driven to live-driven purchases

L1 — Primary Supporting (incl. Guardrails)

Metric	Definition	Target
View-to-purchase conversion rate	% of live viewers who complete a purchase	≥ 20% increase for live-featured SKUs (PRD target)
Average watch time per session	Minutes spent per viewer per live session	≥ 25% increase (PRD target)
Fraud/bot-flagged engagement rate (guardrail)	% of sessions with flagged fake engagement	Held near zero; any sustained level blocks Phase 4 scale-up
Creator-led GMV contribution %	Share of total platform GMV attributable to live commerce	Tracked monthly, used to evaluate Phase 4 marketing ROI

L2 — Diagnostic

Metric	Definition	Why It Matters
Bundle (“Shop the Look”) purchase rate	% of live purchases that include a bundled outfit	Diagnoses whether AOV growth (PRD Section 3.1 goal) is coming from bundling as intended
Repeat visit rate for the Live tab	% of users returning to Live within 30 days	Early indicator of habitual engagement vs. one-off curiosity visits
